

Honesty and precision in all our communication

Respect to everyone with whom we have contact

Integrity in all our actions

Responsibility for delivering on our commitments

are the founding values that unite all the employees of the Huntsman Group all over the world and are promoted in internal relationships, towards customers and towards all those with whom we enter into a relationship and are our guide for making decisions every day.

Huntsman Gomet S.r.l. ("Gomet") recognizes the commitment to safeguard and develop the environment as a fundamental and unavoidable value.

The careful analysis of risks and opportunities, ascribable to environmental factors, suggests a framework for setting ambitious environmental goals.

The automotive market, in which Gomet has been operating for over 40 years, is increasingly attentive to safety, reliability and respect for the environment, and demands that every part of the vehicle actively contribute to the pursuit of these interests.

The location of our site in an area rich in diversified natural elements, which is day by day more important to; civil society, professional and competent customers and suppliers, employees and collaborators, is a further stimulus.

As Managing Director of Gomet, I herewith confirm my conviction that the correct management of environmental issues is a fundamental growth factor for our company.

My collaborators and I, through compliance with company procedures and the adoption of specific improvement programs,

we commit ourselves to:

- operate honestly and in full compliance with current national, regional and local legislation on the environment, trying to implement, where possible, best practices, to exceed the requirements of the law itself;
- reduce emissions to a minimum and keep pollutant abatement systems operational and efficient;
- eliminate the risks of spills on the ground and underground and be properly prepared to deal with any emergency with promptness;
- promote careful use of resources at all levels;
- take care of energy management in order to maximize savings and, where possible, promote the use of energy from renewable sources;
- a correct separation of waste in order to optimize recycling;
- give priority to initiatives with a lower negative impact deriving from the introduction of new technologies, processes, services and activities;
- raise awareness among staff of the importance and responsibility of their role in the company;

Moreover:

- we believe that the continuous training of employees and external collaborators is an essential element for the correct understanding and application of the cause of respect and care for the environment;
- we consider the clarity and transparency as reference values for our behaviour, and therefore we affirm our willingness to provide useful information for understanding the environmental effects of our activities.

The UNI EN ISO 14001:2015 international standard is an effective reference for us for the application, maintenance and continuous improvement of our environmental management system.

Azeglio, 28/01/2022

Clemens Rollmann

Managing Director
